Bird Study Volume 46 Supplement 1999

## Large-scale Studies of Marked Birds Proceedings of EURING 97 Conference

Edited by S.R. Baillie & P.M. North

Editorial	4
Modelling the survival of British Lapwings <i>Vanellus vanellus</i> using ring-recovery data and weather covariates E.A. Catchpole, B.J.T. Morgan, S.N. Freeman and W.J. Peach	5
Understanding information criteria for selection among capture–recapture or ring recovery models D.R. Anderson and K.P. Burnham	14
Multi-way comparisons and generalized linear models of nest success: extensions of the Mayfield method N.J. Aebischer	22
Program RDSURVIV: an estimation tool for capture–recapture data collected under Pollock’s robust design W.L. Kendall and J.E. Hines	32
Competing events, mixtures of information and multistratum recapture models J.-D. Lebreton, T. Almeras and R. Pradel	39
Smoothing hazard functions for telemetry survival data in wildlife studies K. Tsai, C. Brownie, D.W. Nychka and K.H. Pollock	47
Estimating transition probabilities in unmarked populations – entropy revisited E.G. Cooch and W.A. Link	55
Development and application of a mark–recapture model incorporating predicted sex and transitory behaviour M.J. Conroy, J.C. Senar, J.E. Hines and J. Domenech	62
Comparison of different approaches to the study of local recruitment of breeders R. Pradel and J.-D. Lebreton	74
Joint analysis of mark–recapture, resighting and ring-recovery data with age-dependence and marking-effect R.J. Barker	82
Survival, breeding probability, and reproductive success in relation to population dynamics of Brandt’s Cormorants <i>Phalacrocorax penicillatus</i> N. Nur and W.J. Sydeman	92
A method for studying post-fledging survival rates using data from ringing recoveries D.L. Thomson, S.R. Baillie and W.J. Peach	104

Body size and age of recruitment in Snow Geese <i>Anser c. caerulescens</i> E.G. Cooch, D.B. Lank, R.F. Rockwell and F. Cooke	112
Program MARK: survival estimation from populations of marked animals G.C. White and K.P. Burnham	120
Demographic stochasticity: a case study using the ULM software S. Legendre	140
Selection of survival and recruitment models with SURGE 5.0 A.-M. Reboulet, A. Viallefont, R. Pradel and J.-D. Lebreton	148
Using POPAN-5 to analyse banding data N. Arnason and C.J. Schwarz	157
Effects of age- and sex-biased dispersal on the estimation of survival rates of the Sand Martin <i>Riparia riparia</i> population in Hungary T. Szép	169
Measures of productivity and survival derived from standardized mist-netting are consistent with observed population changes D.F. DeSante, D.R. O'Grady and P. Pyle	178
Use of ring recoveries to monitor long-term changes in the survival rates of British and Irish Cormorants <i>Phalacrocorax carbo</i> C.V. Wernham and W.J. Peach	189
Monitoring survival rates of Swainson's Thrush <i>Catharus ustulatus</i> at multiple spatial scales D.K. Rosenberg, D.F. Desante, K.S. Mckelvey and J.E. Hines	198
COMDYN: software to study the dynamics of animal communities using a capture-recapture approach J.E. Hines, T. Boulinier, J.D. Nichols, J.R. Sauer and K.H. Pollock	209
Survival and dispersal of male Corncrakes <i>Crex crex</i> in a threatened population R.E. Green	218
Modelling survival rates in the Cape Griffon <i>Gyps coprotheres</i> , with emphasis on the effects of supplementary feeding S.E. Piper, A.F. Boshoff and H.A. Scott	230
Effects of avian cholera on survival of Lesser Snow Geese <i>Anser caerulescens</i> : an experimental approach M.D. Samuel, J.Y. Takekawa, V.V. Baranyuk and D.L. Orthmeyer	239
Identifying sources of heterogeneity in capture probabilities: an example using the Great Tit <i>Parus major</i> J.C. Senar, M.J. Conroy, L.M. Carrascal, J. Domènech, I. Mozetich and F. Uribe	248
Are survival estimates and models obtained by capture-recapture correct? A triple analysis of data with known dates of death A. Viallefont, S. Kanyamibwa and B. Asselain	253
General strategies for the analysis of ringing data D.R. Anderson and K.P. Burnham	261
Large-scale studies of marked birds in North America J. Tautin, L. Metras and G. Smith	271

Applications of large-scale studies of demographic rates to bird conservation <i>R.E. Green</i>	279
Quantitative studies of bird movement: a methodological review <i>J.D. Nichols and A. Kaiser</i>	289
Stopover strategies in birds: a review of methods for estimating stopover length <i>A. Kaiser</i>	299

### Sponsors

We are very grateful to the organizations that provided financial support for EURING97: Joint Nature Conservation Committee, British Trust for Ornithology, The Wildlife Society, The Royal Society, British Ornithologist's Union, British Council, Anglia Survival, Strathmore Water, Crowes of Norwich.

### Acknowledgements

We are particularly grateful to the following people for help with various aspects of the organization of EURING97. S. Adams, D.R. Anderson, D. Balmer, J.R. Blackburn, C. Bunck, J.A. Clark, N.A. Clark, H. Crick, L. Dixon, S. Foulger, J. Gill, S. Gough, P.C. Lack, C.J. Mead, B.J.T. Morgan, I. Newton, E. Paradis, S. Rider, J.R. Simons, G.M. Siriwardena, F. Spina, D.L. Thomson, M.P. Toms, S.G. Waghorn, C.V. Wernham.

Many people assisted with the production of these proceedings. All contributions were fully peer reviewed and the efforts of the referees helped to ensure that the resulting papers are clear and of a high standard. Drs Helen Smith and Humphrey Crick helped to edit some of the papers. Sam Rider provided the main secretarial support for both editors, with assistance from Susan Waghorn. Mary Fox ensured that all aspects of the technical editing and production ran smoothly. Dr Andrew Gosler, overall editor of *Bird Study* until December 1998, also provided much help and advice. We are most grateful to all these people and to the Joint Nature Conservation Committee who provided financial support towards the production of this volume.

### EURING 2000

Planning for the next meeting in this series is well advanced. EURING2000 will take place in California in October 2000. Further details are available from the meeting web site (<http://mbmohp.fws.gov/euring/>).
